NEN STEAM MACHINE

NEN is not simply a PC turned Steam Machine. It is engineered from the ground up to game with the mechanics of the PC imbued with the genetics of console to be the most powerful small form Steam Machine. Game like a PC with your keyboard and mouse or play like a console with the all new bundled Steam Controller.

Size, sound, acoustics, and lighting are all very important for a system that will anchor in the home entertainment center. ZOTAC engineers were able to maintain a height of two inches to ensure it fits neatly into the entertainment center while still outfitting dual radial coolers for maximum cooling performance at whisper quiet levels and the ability to disable the power on LED so it will be just you and the game. Power on to a whole new way to play with SteamOS. Access thousands of games* and connect with millions of gamers*.
